

I2CCHIP

OLD VERSIONS OF I2C2PC AND BL233-A

From **September 2005** I2CChip changed the I2C-2-PC to new Version 3. The BL233-A has been replaced by BL233B.

This documentation is for the old **V2** of I2C2PC, using BL233-A.

V2 units are easily recognised. The I2C connectors are not arranged centrally (there is room for a fourth which is not fitted). The pcb does not have a silkscreen

V3 units have 3 centrally positioned I2C connectors, silkscreen on the bottom of the pcb, and pcb identification "I2CAd 0532"

Read the "Shipping Sheet" first, before other documentation.
